

PRODUCT DATA SHEET

Fiber Optic Jumpers and Pigtails

Description

Nitrotel offers a complete line of fiber optic jumpers and pigtails to service all network applications. Our fiber optic jumpers and pigtails include high quality components and are manufactured to comply with industry standards for optical, mechanical, and environmental performance. The wide selection of connectors, cable types, and lengths ensures that jumpers can be optimized for each unique installation.

As transmission platforms become denser, there is a need to route more fiber through smaller spaces. To accommodate this ever-increasing challenge, the standard fiber cable diameter for jumpers is 2.0 mm. Using 2.0 mm diameter cable can more than double the fiber capacity of overhead fiber routing troughs while making fiber management easier in tightly packed cabinets. There is a 3.0 mm option to match jumpers in legacy networks.

Singlemode jumpers and pigtails use our industry-recognized EasyBand®, while multimode jumpers and pigtails use our and MaxBand® fiber and the connectors may be ordered with standard physical contact (PC), ultra physical contact (UPC) and also angled physical contact (APC) end face finish, to reduce back reflections to less than -65 dB. Multimode jumpers are available with either 62.5- or 50-micron core sizes to match system requirements. Multimode connectors are polished to a physical contact standard for back reflections lower than -40dB. Nitrotel Jumpers are 100% tested to meet rigorous optical, geometric, and surface defect specifications and have demonstrated significant improvements in network performance and reliability for high power, high bit rate systems. Customized lengths can be ordered in 1-meter increments.

Features

- Singlemode (9/125) and multimode (62.5/125 and 50/125) jumpers in simplex or duplex Zip-cord type configuration.
- Connector types include SC, FC, LC, E2000, and MT-RJ.
- Singlemode connectors are available with PC, APC and UPC Type
- Customized fiber lengths, connector pairs, and hybrids can be specified.
- Buffer size: 900 µm and “Kevlar” aramid reinforcement
- Jacket OFNR or LSZH
- Included PVC cap for ceramic ferrule protection

Specifications

Specification	Units	Premium Grade
Insertion Loss (@1310 nm, 1550 nm) Singlemode	dB	0.20
Multimode	dB	0.40
Return Loss (@1310 nm, 1550 nm)		
APC ferrule end face finish (singlemode)	dB	>65
UPC ferrule end face finish (singlemode)	dB	>55
PC (multimode)	dB	>40
Insertion Repetibility	dB	≤ <0.10
Length Tolerance		
1 to 10 meter lengths	m	±0.1
>10 meter lengths	m	±0.3
Operating Temperature	°C	-40 to +65
Testing for Insertion Loss & Return Loss		100%

EasyBand® Plus Bending Insensitive Single-mode Fiber

Descriptions

Nitrotel EasyBand® Plus bending insensitive single mode fiber combines two attractive features: excellent low macro-bending sensitivity and low water-peak level. It is comprehensively optimized for use in O-E-S-C-L band (1260 -1625 nm). The EasyBand® plus's bending insensitive feature not only guarantees L-band applications but also allows for easy installation without excessive care when storing the fiber especially for Fiber-to-the-Home networks application. Bending radius in fiber guidance ports can be reduced as well as minimum bend radius in wall and corner mountings. Moreover, it has the same mode field diameter as standard single mode fiber, which ensures that it has low connection loss with standard single mode fiber (including fusion splicing and mechanical coupling, etc.) and high power-handling for increased access network capability and flexibility. Nitrotel EasyBand® Plus bending insensitive single mode fiber meets or exceeds the ITU-T Recommendation G.652.D/G.657.A1/G.657.A2/G.657.B2 including the IEC 60793-2-50 type B1.3/B6 Optical Fiber Specification.

Application

- All types of fiber cables with different structures
- High performance optical network operating in O-E-S-C-L band
- High speed optical routes for Fiber-to-the-Home networks
- Cables with extreme low bending requirements
- Small-sized fiber cable and optical component
- Application in L band (1565-1625 nm)
- 1 & 10 & 40 & 100 Gb/s Ethernet

Process

Nitrotel optical fibers are manufactured using the advanced Plasma Activated Chemical Vapor Deposition (PCVD) process. Because of the inherent advantages of the process, Nitrotel fibers show ultra accurate refractive index (RI) profile control, excellent geometrical performance, low attenuation, etc. High performance bending insensitive requires a special Freon-Downpiped-Cladding design to prevent the optical field to escape. PCVD is the optimal process to realize such cladding design effectively. The optical fiber is coated with Nitrotel's proprietary dual layer UV curable acrylate. This fiber coating system provides the fiber with superior environmental protection. Designed for more stringent tight-buffer cable application, the fiber also performs perfectly in loose buffer constructions and demonstrates a high resistance to micro-bending. Nitrotel's proprietary coating offers very stable coating strip force over a wide range of environmental conditions with no coating residue on the bare glass fiber. In fiber ribbon constructions, this coating system exhibits excellent performance in 60 exceeding 100 days. The coated optical fiber has high and stable values for the dynamic stress corrosion susceptibility parameter (nd), which provides greatly improved fiber durability when used in harsh environments.

Characteristics

- Extremely high bending loss resistance in the 7.5 to 15mm bend radius range
- Full compatibility with all G.652 fibers for any application
- Low attenuation satisfying the operation demand in O-E-S-C-L band
- Low PMD satisfying high bit-rate and long distance transmission requirements
- Low micro-bending loss for highly demanding cable designs including ribbons
- Accurate geometrical parameters that insure low splicing loss and high splicing efficiency
- High nd-value satisfying long operational lifetime in minimum bend radius

MaxBand® OM2+/OM3/OM4 Multimode Fiber

NITROTEL MaxBand at OM2+ Multimode Fiber complies with or exceeds ISO/IEC 11801 Om2 specification, IEC 60793-2-10 type A1a.1 Optical Fiber Specification, and TIA/EIA-492AAAB-A detail specification.

NITROTEL MaxBand at OM3/OM4 Multimode Fibers comply with or exceed ISO/IEC 11801 OM3/OM4 specification, IEC 60793-2-10 type A1a.2 and A1a.3 Optical Fiber Specification, and TIA/EIA-492AAAC/492AAAD detail specification.

Features

- 850nm laser-optimized
- Extremely refined refractive index profile
- Low differential mode delay (DMD)
- Low attenuation
- Superior geometry, uniformity

Fiber Type	Jacket Color
SM	Yellow
MM OM1	Orange
MM OM2	Orange
MM OM3	Aqua
MM OM4	Violet

Benefits and Applications

- Data centers
- Storage Area Networks
- High performance computing centers
- Central offices
- Local Area Networks
- 1 & 10 & 40 & 100 Gb/s Ethernet
- Optimized performance in tight-buffer cable
- High resistance to micro-bending
- Stable performance over a wide range of environmental conditions

System Link Length

40 & 100 Gb/s Link Length @850nm Based on IEEE802.3ba

10Gb/s Link Length @850nm Based on IEEE802.3ae

1 Gb/s Link Length @850nm Based on IEEE802.3z
